ABSTRACT

This report discusses the extent and character of the distance learning (DL) activities of Maryland colleges and universities during academic year 2000 (fall semester 1999 and spring semester 2000). Out-of-state institutions that might have been operating in Maryland are not included. Between 1997 and 2000, Maryland colleges and universities increased the number of credit courses offered by all forms of distance learning from 1,245 credit courses with 29,145 enrollments to 2,135 courses with 53,194 enrollments. In 1997, one-way, pre-recorded video was the most popular mode of DL delivery, but in 1999-2000, the most popular modes were asynchronous online instruction (1,064 courses), one-way, prerecorded video (513 courses), and two-way interactive video and audition (362 courses). In 2000, 14 Maryland institutions offered 50 degree programs either primarily or entirely by distance learning. A digital divide has been identified between Maryland's higher education institutions. On one side are the institutions that have adopted DL enthusiastically, and on the other are institutions, generally the smaller community colleges, a few public universities, and most independent colleges, who have not invested in electronically mediated instruction. Study results suggest that much of the future growth in higher education enrollments will be in the use of information technologies to reach new markets, colleges, and universities that have not entered DL in a competitive way. The survey is attached. (Contains 87 tables.) (SLD)

Executive Summary

This report discusses the extent and the character of the distance learning (DL) activities of Maryland colleges and universities during Academic Year 2000—fall semester 1999 and spring semester 2000. Out-of-state institutions that might have been operating in the State are not included. “Distance learning,” as used here, refers to education or training delivered *off-campus* via electronic technologies, including video, audio, and computer-based instruction.

When possible, comparison is made in this analysis with data previously reported for the four instructional sessions of *calendar 1997* -- the winter session, the spring semester, the summer session, and the fall semester. Overall, the data indicate an explosive growth of distance learning in the three intervening years. A few of the most significant findings resulting from the survey and analyzed in the following pages are:

- Between 1997 and 2000, Maryland colleges and universities increased the number of credit courses offered by all forms of distance learning from 1,245 credit courses with 29,145 enrollments to 2,135 courses with 53,194 enrollments.
- In 1997, the most popular modes of delivery for distance learning in rank order were
 - (1) one-way, pre-recorded video (493 courses);
 - (2) two-way interactive video and audio (335 courses); and
 - (3) asynchronous online instruction (153 courses).

In 1999-2000, the most popular modes of delivery for distance learning in rank order were

- (1) asynchronous online instruction (1,064 courses)
 - (2) one-way, pre-recorded video (513 courses);
 - (2) two-way interactive video and audio (362 courses);
- In 1997, 10 Maryland colleges and universities offered 17 degree programs either primarily or entirely by distance learning. In 2000, 14 Maryland institutions offered 50 degree programs either primarily or entirely by distance learning.
- A “digital divide” has developed among Maryland’s higher education institutions in regard to their participation in the information technology revolution. On one side of the divide are the University of Maryland University College (UMUC), the larger community colleges, several public universities, and 4 independent institutions. These institutions have adopted distance learning enthusiastically. On the other side of the divide are institutions—generally the smaller community colleges, a few public universities, and most independent colleges, who have (for either financial or academic reasons) not invested in electronically-mediated instruction and do not share in the enrollments it attracts.
- There is a need for online “utilities” such as *MarylandOnline* and the *Maryland Digital Library* that provide support services to all institutions. These utilities can help the weaker institutions achieve a more level playing field while also providing services needed by the technology leaders.

This is not to suggest that the expansion of distance learning has not touched all segments of higher education. It has. The data reveal the following:

1. Whereas three years ago, of the 11 constituent institutions of the University System of Maryland (USM), only the University of Maryland University College had a significant distance learning effort; now all of the institutions of the USM have adopted DL in at least a limited form. Six USM campuses now offer complete degree programs by DL.
2. Still, the University of Maryland University College continues to dominate distance learning in Maryland as it did in 1997; and, because of the number and breadth of the courses (536) and degree programs (24) it offers online, UMUC has become a world-class competitor in the field of electronic distance learning.
3. Since 1997, the DL enrollments of all community colleges have grown; but a gap seems to be widening between the relatively large DL enrollments at 5 of the larger community colleges (Anne Arundel, College of Southern Maryland, Prince Georges, Community College of Baltimore County, and Howard), on the one hand, and the smaller DL enrollments of the rest of the community colleges.
4. Although 4 independent colleges—Capitol College, Columbia Union College, Goucher College, and Johns Hopkins University—have become major distance learning providers, the vast majority of independent colleges and universities (19 out of 26 institutions) have not adopted distance learning in any form.
5. The baseline technology necessary for the delivery of asynchronous computer-aided courses exists at all public institutions; but this infrastructure is absent at most independent colleges and universities.

If, as many experts contend and the data here displayed indicate, much of the future growth in higher education enrollments will be in the use of information technologies to reach new markets, colleges and universities which have not entered distance learning in a competitive way will be at a great disadvantage. Detailed institutional data are contained in the tables that follow the narrative report. Summary tables by segment are interspersed through the narrative and are also found among the tables. In Section VI: *Concluding Remarks*, certain implications for policymakers are discussed.

Finally, a word of caution. One should note that "distance learning is not for everyone." Certain institutions have made a clear policy decision that the provision of distance learning is not appropriate to their mission. In other cases, faculties have decided that their discipline does not lend itself to distance learning. These are reasonable and valid decisions. Each institution must decide what is the proper balance between traditionally delivered instruction and instruction delivered by distance learning. But State policy should assure that this decision is based on academic grounds, not on a lack of information technology resources.

Introduction

The purpose of this report is to provide a portrait of the use of distance learning by Maryland colleges and universities. This data was collected in Fall 2000 for the first time as a part of the regular postsecondary education data collection of the Maryland Higher Education Commission. At present, it is planned to collect this data bi-annually.

Since the first survey of distance learning covering calendar year 1997, immense changes have occurred in the use of information technology in Maryland's colleges and universities. Much of this has been due to the coordination, encouragement, and leadership provided by the founders of the *Maryland Community College Teleconsortium* (MCCT) and *MarylandOnline* (MOL). These two organizations (recently merged into an expanded MOL) have developed statewide guidelines, provided statewide faculty technology training, and improved the student services available to distance learners in Maryland. In addition, since 1997, the University of Maryland University College (UMUC) has completed its transformation into the nation's leading virtual institution. As the data in this report will attest, UMUC provides more distance learning opportunities than all other Maryland institutions combined. And UMUC was the generous nurturing home for the birth and development of *MarylandOnline*.

Unfortunately, other initiatives to support distance learning in Maryland have not come to fruition. As of this writing in summer 2001, there still is no statewide educational network to facilitate and support the sharing of electronic courses (and other forms of data) among Maryland's colleges. The *Maryland Digital Library* is in danger of collapsing because of a lack of predictable funding. And the future of MOL itself is still uncertain.

In spite of these difficulties, the growth of distance learning in Maryland—especially of online learning—from 1997 to 2000 has been rapid. Many institutions have decided that they must develop the capacity to deliver distance learning to serve their students better. Other institutions have seen this as an entrée into new markets. In just three years the number of institutions offering online courses increased from 11 to 28, the number of online courses mushroomed from 183 to 1,115, and the total enrollments in electronically-delivered distance learning credit courses almost doubled from 29,415 to 53,194. However, the bulk of this growth was attributable to UMUC.

The reader should be aware that the rapid expansion in distance learning quickly renders precise data out-of-date; so the data herein are best seen as indicators of the relative size of the activity among the several institutions and segments of higher education at one point in time rather than as a precise indicator of the specific activity by any one individual institution.

For the purposes of this survey, the term "distance learning" refers to

education or training delivered off-campus via audio, video and/or computer technologies, but does not include courses conducted exclusively via traditional print-based correspondence or courses in which the instructor travels to the remote site to deliver instruction in person for all class meetings.

Detailed tables containing the institutional responses to the survey are presented in the *Appendix*. In the report, the data have been analyzed in five topical categories:

- (1) Measures of activity
- (2) Delivery methods
- (3) Instructional practices
- (4) Support services for students and faculty
- (5) Telecommunications equipment and services.

References in the text to numbered tables refer to the tables in the *Appendix*. Tables integrated into the text are indicated by letters. The data analyzed for this report will be updated regularly as a part of the Maryland Higher Education Commission's regular data collection process.

The primary author of this study was Dr. David E. Sumler, Director of Academic Affairs, Maryland Higher Education Commission.

I

Measures of Activity

Institutions were asked to report four indicators of the level of distance learning (DL) activity for Academic Year 1999-2000. The four indicators are

- Number of credit courses delivered by distance learning
- Enrollment in credit courses delivered by distance learning
- Number of non-credit courses delivered by distance learning
- Enrollment in non-credit courses delivered by distance learning.

When examining the data for courses, one must keep in mind that these data include all forms of electronically delivered courses. Therefore, one should not read into these numbers the prevalence or scarcity of a particular type of technology -- say, online courses or interactive video courses, because all methods of delivery are combined in this section. The extent of the use of different technologies is discussed in Section II of this report. The measures of activity for individual institutions are presented in Tables 1-16 in the *Appendix*.

Credit Courses Offered by Distance Learning

During 1999-2000, 34 out of 55 degree-granting institutions offered a total of 2,135 credit-bearing courses by distance learning. A few of these courses were repeated from session to session. So, the total of 2,135 includes courses duplicated from semester to semester.

Table A provides an overall view of the expansion of distance learning during the past three years. The total number of courses offered by distance learning has increased by 71.5%.

Table A: Credit Courses offered by Distance Learning (Duplicate courses included)

	Total # of Credit Courses Calendar 1997	Total # of Credit Courses Academic Year 1999-2000	Percentage Increase from 1997-2000	Percentage of Total in AY 2000
UMUC (University College)	216	536	148	25%
Other 4 Year Public Institutions	135	252	86	12%
Community Colleges	837	1,013	21	47%
Independent Institutions	57	334	486	16%
Total	1,245	2,135	71	

The expansion in all segments of higher education is clear. However, the absolute leadership of UMUC is so notable that this institution has been broken out in most of the data tables in this study. Of the 789 credit DL courses offered by the public 4-year institutions, the

University of Maryland University College (UMUC) offered 536 (68%). The next most active public 4-year campuses were: University of Maryland, Baltimore City (UMB) with 77 credit DL courses and University of Maryland, College Park (UMCP) with 60. (Table 1 in the appendix.)

The courses offered by community colleges were distributed among all the colleges, with all community colleges offering at least a few distance learning credit courses. (Table B) The most active community colleges were the largest ones: Community College of Baltimore County (155 courses), Anne Arundel Community College (138 credit courses), Prince Georges Community College (134), Howard Community College (127), and College of Southern Maryland (88). (Table 3)

The independent institutions as a group have increased their credit courses offered by distance learning by 486%, from 87 in 1997 to 334 in 1999-2000. However, these courses are offered by only 7 institutions out of 26. The majority of independent colleges and universities offer no DL courses. The most active campus was Columbia Union College, offering 200 DL credit courses. Other independent institutions offering significant numbers of DL credit courses were Goucher College (49), Johns Hopkins University (45), and Capitol College (31).

Enrollments in Distance Learning Credit Courses

There were 53,194 headcount enrollments in credit-bearing courses offered by distance learning during Academic Year 1999-2000, an increase of 81% since 1997.

If one assumes that all of the credit courses were 3-credit courses, then one can assume that an equated full-time course load per student would be 10 courses (15 credit hours per semester, or 30 credit hours per year). By dividing the number of individual enrollments by the assumed course load, the resulting number of full-time equivalent students (FTES) for Academic Year 1999-2000 would be 5,319. This number would have to be adjusted slightly to account for graduate students, who take fewer courses per semester. Still, the total of around 5,200 - 5,300 FTES is a relatively safe estimate. If one compares FTE enrollment in DL in AY 1999-2000 to total FTE enrollment in all credit courses for Fall 1999 (207,167), the enrollment in DL accounted for approximately 2.6 % of total FTES enrollment. Since most of the DL enrollments were in the public institutions, the percentage was 2.9% when the public segments are considered separately. The DL enrollment equaled approximately the enrollment of one medium-sized public university, such as Frostburg State University or Salisbury University, but these online enrollments did not require dormitories, or classroom buildings.

**Table C: Enrollments in Distance Learning Credit Courses
Delivered by All Technologies**

	Total # of Credit Enrollments Calendar Year 1997	Total # of Credit Enrollments Academic Year 1999-2000
UMUC (University College)	11,687	31,424
Other Public 4-Years	1,253	3,367
Community Colleges	15,822	16,059
Independent Institutions	653	2,344
Total	29,415	53,194

Non-Credit Courses Offered by Distance Learning

There were very few non-credit courses offered by distance learning in 1997—only 128 total. By 1999-2000, this number had more than tripled to 419. As in 1997, almost all (94%) of these courses were offered by community colleges. (Table D.)

This is somewhat surprising that more colleges and universities have not tapped this market; since the primary audience for distance learning is generally assumed to be already employed adults, who might be considered a ready market for non-credit personal and professional development opportunities.

Enrollments in Non-Credit Courses Offered by Distance Learning

Since the number of non-credit DL courses was small compared to the number of credit DL courses, the enrollment in non-credit courses was also proportionately smaller than that in credit courses. For the Academic Year 1999-2000, the non-credit DL enrollments were 2,090, compared to over 53,000 credit enrollments. Ninety-six percent (96%) of these enrollments were in community college courses. The total was a 98% increase over the 1997 total. (Table E.)

II ***Delivery Methods***

The survey sought answers to two major questions concerning delivery methods:

- Which were the primary technologies used?
- What were the intended instructional sites?

The survey distinguished among 9 primary instructional technologies and also had an "other" option. Twelve alternate delivery sites were offered, including at the student's home. Summary data are presented in Tables F and G on the following page. Data for individual institutions are presented in the tables in the *Appendix*. (Tables 17-28.)

Online Instruction

At some point during the period 1997 - 2000 asynchronous online instruction replaced one-way, pre-recorded video as the dominant mode of delivery for distance learning in Maryland. It is rare that we are able to identify such a change in educational practice so precisely.

In 1997, "asynchronous online instruction" ranked third among the most used modes of delivery. This instruction is entirely computer-based, available through the Internet. A course offered online is available to any student worldwide with access to the Internet. Such an instructional mode has only been available for a few years; and it is the most promising technology for the future growth of distance learning.

In Academic Year 1999-2000, the increase in the number of asynchronous online courses (1,067 in 1999-2000, up from only 153 in 1997) made this the most used mode of delivery for distance learning. This remarkable increase reflected the adoption of online instruction by almost all public colleges - both community colleges and four-year institutions. (Tables 17=20.) Whereas UMUC was alone among the public 4-year institutions in offering asynchronous online courses in 1997, by 1999-2000, 7 of the 13 public 4-year colleges and universities offered courses with this technology. Similarly, only 7 community colleges offered asynchronous online courses in 1997, but 14 of 16 community colleges did so in 1999-2000.

As we have seen, independent colleges offered few courses by distance learning in 1997. Most of the online courses were offered by two institutions: Johns Hopkins University (JHU) and Capitol College. The Johns Hopkins University offered 14 courses online, and Capitol College offered 4 courses online. In 1999-2000, Capitol College had increased its online offering to 28 courses; while JHU had reduced its online courses to 7. However, Goucher College now offers 49 online courses (versus 1 in 1997) and 3 Master's degree programs. Other independent campuses reporting online courses were Baltimore Hebrew University, Maryland

Table F. Rank Order of Use of Leading Distant Learning Delivery Modes
Academic Year 1999 – 2000

Technology	Rank in 2000	# of courses in 2000	Rank in 1997	# of courses in 1997

Institute College of Art, and Western Maryland College.

It must be noted that the growth of online instruction in Maryland has been greatly aided by two consortia: the *Maryland Community College Teleconsortium* (started in 1998) and *MarylandOnline* (begun in 1999). These two organizations, that have recently merged into MarylandOnline), have provided the structures necessary for the sharing of courses, statewide faculty technology training, the development of common policies, and shared student services.

Video

In 1997, by far the largest number of DL courses (493) were delivered by one-way, pre-recorded video. This was probably an indication of the large number of courses offered by the *College of the Air*, a consortium of colleges (mostly community colleges) contracting with Maryland Public Television to offer college courses for credit, with the video being broadcast by MPT into students' homes. The second most numerous category in 1997 was those courses (335) offered by 2-way interactive video and audio.

While there was a slight increase in the number of DL courses delivered by the several video technologies between 1997 and 1999-2000, it is clear that the rapid expansion of this technology evident in the early 1990s has given way to the growth in online instruction.

Interactive video courses in Maryland are offered over three networks:

- (1) the Maryland Interactive Distance Learning Network (MDLN),
- (2) the University System of Maryland Interactive Video Network (IVN), and
- (3) the Baltimore Region Community Colleges Instructional Video Network (BRCCIVN).

MDLN is a full-motion video, fiber optic DS-3 network managed by Verizon. IVN and BRCCIVN are compressed video networks carried on T-1 lines. A MDLN classroom connects four sites interactively with video quality similar to a home television. There are 8 monitors in a classroom (4 in front for the students to see, 4 in back for the teacher to see). An IVN or BRCCIVN classroom has two monitors-one showing the distant class and one in the classroom where instruction takes place. The compressed video is slightly distorted.

Whereas the total number of video courses increased by 305 courses, most of this increase was in the transmission of one-way live video with one-way audio by UMUC (178 courses) and by the community colleges (90 courses). The increase in two-way interactive video and audio courses (teleconferencing) was only 27 courses (from 335 to 362). The number of pre-recorded video courses (such as the *College of the Air* offers on public television) also had a modest increase of 20 courses (from 493 in 1997 to 513 in 1999-2000).

As we have seen, independent colleges offered few courses by distance learning. In fact, the number of video courses offered by independent colleges and universities actually decreased from 19 to 15 over the three years between surveys.

Sites for the Delivery of Video Instruction

As opposed to online instruction which is available where and when a student can access the Internet, interactive video-instruction is site-based and scheduled for specific times, like traditional classroom instruction. During the 1999-2000 academic year, the most popular delivery sites were video classrooms at branch campuses or off-campus centers of the institutions offering the courses (217 courses). The second-most popular spot for public 4-year institutions was at other public 4-year institutions and for community colleges at other community colleges. (Table I and Tables 25-28.)

Once again, the discrepancy between the activity of the public institutions and the independent colleges and universities is striking. Whereas 217 courses were delivered to branch campus sites by video, only 7 of these were offered by independent institutions.

Since 1997, considerable progress has been made in providing on-site educational opportunities at private sector workplaces and at military installations. The number of courses delivered to private sector workplace increased from 2 in 1997 to 35 in 1999-2000. Courses offered at military bases were up from 7 to 65. In both cases the major provider of these courses was UMUC. Still, these are relatively small numbers, especially in regard to private industry.

In one negative outcome, campuses reported delivering fewer video courses to public secondary schools in 1999-2000 than in 1997. The total was down from 37 to 25.

Primary Audiences for Distance learning

The institutions being surveyed were requested to identify the primary intended audience for each of their credit and non-credit courses. The common belief is that distance learning, especially asynchronous online instruction, is ideally structured to appeal to adult, fully-employed learners who need to find time in a busy schedule for education.

Institutions were asked to select from among a variety of potential audiences as indicated in Table K on the following page. The largest proportion of courses (63%) for which a primary audience was identified were intended for undergraduate students. But this was down from 83% in 1997. The next largest intended audience was graduate students with 17.5% of all courses in 1999-2000 being aimed at this audience—up from 10.5% in 1997.

III ***Instructional Practices***

The institutions surveyed were asked several questions concerning the nature of their distance learning offerings. The general intent was to determine the relationship of their offerings to their traditional on-campus curriculum.

Development of Course Content

It was not surprising to note that the largest group of DL courses were developed by the faculty of the institutions offering the courses. (See Table L) Of the 2,284 courses reported in response to this question, 1,626 (71%) were developed by the institutions' faculty members. In fact, all of the courses offered by UMUC, the other 4-year public institutions, and the independent colleges were developed by faculty at the institution offering the courses.

Among community colleges, on the other hand, 451 (20%) of the courses were developed by commercial vendors. It may be assumed that these are *College of the Air* courses distributed by the Public Broadcasting Service's Adult Learning Service and the Annenberg CPB project. Whatever the source, the use of commercial vendors is a significant development in the Academic world. Still, given the large vendor industry that has developed to provide online courses, it is surprising Maryland institutions have not adopted more commercial instructional content.

Among independent colleges, all courses reported were developed by either institutional faculty or by another college or university.

Degree Programs Offered by Distance Learning

The development of an individual course for delivery by distance learning can be a very difficult and challenging task, and it indicates a significant investment of resources by an institution. The offering of *entire* degree programs, therefore, is not an easy goal to achieve. An associate degree requires at least 60 credits earned or approximately 20 courses. A bachelor's degree requires at least twice that amount -- 120 credits or 40 courses. Master's degree programs are shorter in length (at least 30 credits or around 10 courses).

Given the size of this task, and the fact that the spread of distance learning is so recent, it is not surprising, then, that very few institutions had reached the point, in 1997, of offering entire degrees by DL. In fact, only 6 of the 54 institutions surveyed reported that they offered entire degree programs by distance learning. When asked if they offered any degree programs *primarily by distance learning* (meaning 75% or more of the courses were DL courses), four more institutions joined the first six.

By 1999-2000, the picture had changed considerably, with 14 institutions offering 50 degree programs either entirely or primarily (at least 75% of the required courses) by distance learning. The number of programs was determined largely by UMUC, which offered 24 degree programs (14 bachelor's degrees, 10 master's). (Table M)

In 1997, most of the complete degree programs offered were at the Master's degree level. These are shorter programs, and all the courses are concentrated in the major discipline, making this a more manageable developmental project as compared to an entire bachelor's or associate's degree program requiring general education courses in many disciplines. In 1999-2000, the degrees available by DL (and primarily by online instruction) include 14 associate degree programs and 16 bachelor-level programs as well as 20 master's programs.

Membership in Consortia

During the period between the 1997 survey and the present survey, three significant consortia had developed in Maryland to encourage and foster distance learning. These are the *Maryland Community College Teleconsortium* (MCCT), *MarylandOnline* (MOL), and the *Maryland Digital Library* (MDL).

Through MCCT, the community colleges share their campus-free online offerings. A student at community college A may enroll in courses sponsored by community colleges B, C, D, and so on but will pay the tuition of his or her home college and have the course entered on the transcript as if the course were taken at the home college. MCCT allows the community colleges to save on the considerable costs of producing and delivering distance learning courses while still meeting student demands for quality online instruction.

MarylandOnline is an inter-segmental voluntary consortium of Maryland community colleges and 4-year colleges and universities that enables students to achieve their educational goals by completing articulated courses, certificates, and entire degree programs through the master's degree offered via distance learning technologies. Students with demanding home and work responsibilities have the flexibility they need to pursue the degrees and certificates leading to career advancement and satisfaction. Currently

MarylandOnline represents institutions offering 9 certificate programs, 9 associate degrees, 15 bachelor's degrees, and 12 graduate degrees - all available at a distance.

Maryland's academic libraries, which serve the state's publicly supported and independent two- and four-year colleges and universities, have joined to develop and to put in place, a *Maryland Digital Library*. The goals of MDL are to: (1) increase effective access to information of critical value in both Internet accessible electronic form and in library collections of books, journals, sound recordings and other traditional forms of material, (2) optimize effective use of funding in the acquisition and creation of digital resources, and (3) link Maryland to the rapid Developments in national and global digital library capabilities. The principal benefits of the *Maryland Digital Library* accrue from two key program components – the *Maryland Universal Statewide Access* (MdUSA) that provides access to licensed Internet-accessible information and the *Maryland Premier Academic Catalog* (MdPAC) that provides online access first to existing library holdings and then to newly created digital content.

Table N presents the extent of participation in MOL and MDL. While it is notable that neither of these organizations existed in 1997, it is revealing that only about half of Maryland's colleges and universities are members of the two consortia. These are, of course, the institutions most active in distance learning. The colleges and universities that have not ventured into the world of electronically-mediated instruction were also not active in these cooperative endeavors to foster and expand distance learning. So, a cycle of cause and effect occurs. The gap widens between the leading DL institutions and the institutions not yet involved in DL. As a result, the "digital divide" widens among Maryland's higher education institutions in regard to their participation in the information technology revolution.

IV ***Support Services for Students and Faculty***

Support Services for Distance learning Students

Colleges and universities have developed a number of ways to provide support services for distance learning students—some who may never come on campus. Obviously, these services will vary by the form of instruction. For example, a community college delivering interactive video courses to a local high school may have the instructor visit the school on a regular basis. On the other hand, a public university offering online courses to students who may be anywhere on the globe must also be providing online student services.

In completing the survey, a number of institutions left this section blank—not responding in the positive or the negative. Blank answers have been counted as meaning that the service was “not available.” This interpretation was consistent with other responses from these campuses--such as a lack of courses offered by distance learning.

The major services provided in support of distance learning are contained in Tables N and O. The most notable of these are the online services. Thirty-two (32) institutions provided students with e-mail or online access to an instructor. Twenty-eight (28) institutions provided electronic access to library catalogs. Twenty-three (23) institutions provide online access to wide area networks for students. However, only 16 provided for online registration; and only 9 provided online academic advising.

Training and Technical Assistance for Faculty Members

One measure of the maturity of an institution in offering distance learning is the extent to which the college or university has developed mechanisms for preparing faculty to offer courses by distance learning rather than leaving faculty initiative to chance. Many institutions offer several distance learning courses because of the energy and enterprising spirit of one or two faculty members. But institutions that take distance learning seriously provide training and curriculum development support in an organized and ongoing fashion.

During 1999-2000, only around one-half of the colleges and universities in Maryland had formal programs of faculty training and distance learning course development. Training and technical assistance was far more available to faculty at public institutions than at independent colleges and universities. Twenty-seven (27) of the 29 public institutions responding offered training in the use and application of distance learning technology. Only 6 of the 26 independent institutions offered such training. The same group of institutions reported also providing training for faculty in the development of curricula for DL courses (29) and for teaching methods for DL courses (31).

V

Telecommunications Equipment and Services

Institutions were requested to indicate whether they owned or operated 25 specific types of telecommunications equipment, facilities, or services. For analysis, the equipment/facilities have been grouped into three categories:

1. Multi-media and computer-aided instruction equipment and services.
2. Compressed video, radio and audio facilities;
3. Video production facilities and analog video links;

It must be remembered that, before the 1990s, distance learning using telecommunications meant primarily video broadcasts or interactive video teleconferencing using analog equipment such as satellite transmissions. Therefore, during the 1970s and 1980s, many campuses invested in satellite uplinks and downlinks, video production studios, and other equipment (such as microwave transmission towers) to carry analog video signals.

Following the general availability of the Internet to the public in the late-1980s and its commercialization in the early 1990s, the emphasis of educators shifted to development of online and media-enhanced courses. By 1997, leading institutions had introduced online courses but few complete degree programs. Three years later in 1999-2000, as we have seen, 50 entire degree programs were being offered by distance learning—most of them online.

Higher education institutions have had to adapt to these changing technologies. It has been expensive. The telecommunications infrastructure for entire campuses has been re-designed and replaced in the last half of the 1990s. Generation after generation of rapidly obsolescent computer hardware and software require continual upgrading. The strain on campus budgets and capital funds has been enormous. There should be no surprise that a recent study has concluded that only the financially strongest institutions can afford to remain at the forefront of advances in technology. (Lumina Foundation for Education, *Funding the Infostructure*.)

Multi-media and Computer-aided Instruction Equipment and Services

The fastest growing form of distance learning is asynchronous online instruction *via* the Internet. If a college or university is planning to enter this arena, it must supply a number of related telecommunications services to its students and must develop certain baseline institutional capabilities. This section of the survey requested institutions to indicate whether or not they had these capabilities. A number of colleges and universities, primarily independent institutions that offered no DL courses, left this section blank. These responses are treated as negative responses.

Table Q: Multi-media & Computer-Aided Instruction Equipment and Services
Academic Year 1999-2000

	Internet Node Site	Electronic Classroom	E-mail	WWW	Institutional Web Page	Web Page capability for students	Bulletin board or computer conferencing	Class listserv	Voice Mail
Four Year Public Institutions (13)	10	10	12	12	12	10	12	10	12
Community Colleges (16)	12	14	15	15	15	8	10	7	15
Independent Institutions (26)	4	4	6	6	6	6	6	3	4
Total (55)	26	28	33	31	33	24	28	20	31

The responses displayed in Table Q indicate that proportionally more of the 4-year public institutions had computer-related instructional and multi-media equipment and services available to their students during 1999-2000 than did the community colleges or the independent institutions. For example, while 10 public 4-year institutions were Internet node sites, 12 community colleges and 4 independent institutions had the equipment for this direct link to the Internet.

Electronic bulletin boards, computer conferencing systems, and class listservs are considered by some as essential to online distance learning and can also be enhancements to traditional classroom-based education. Once again, the public 4-year institutions led the way in the implementation of these services. Smaller community colleges and almost all independent colleges and universities lacked these services.

Electronic classrooms are classrooms containing networked PCs which are tied together in a local area network and are usually linked to the Internet. Such classrooms allow students to work together on collaborative projects, to contribute online (sometimes anonymously) to classroom discussions, to do research on the Internet during class, to engage in simulations, and many other applications. Twenty-four (24) of the 29 public institutions had at least one electronic classroom; whereas only 4 of 27 independent institutions reported having these classrooms.

Video Production Facilities and Analog Video Links

A large number of the public campuses had full video production studios. Of the 13 public 4-year institutions, 9 had studios. Likewise, 9 of the 16 community colleges had studios. Only two (2) of 27 independent institutions had studios. The same contrast holds true for television field production units (mobile TV trucks), with 7 public 4-year institutions and 7 community colleges having these trucks. Two (2) independent institutions had such units. (See Table R.)

Of all 29 public institutions, only two community colleges did not have satellite downlinks. The broad use by public institutions of satellite technology once again contrasts starkly with the lack of such equipment among the independents, where only 1 campus reported having a satellite downlink.

**Table R: Number of Institutions with Video Production Facilities & Analog Video Links
Academic Year 1999-2000**

	Full Production Studio	TV Field Production Units	ITFS Channel	ITFS Receive Site	Microwave Dist. Links	Ku Band Satellite Uplink	C Band Satellite Uplink	Ku Band Satellite Downlink	C Band Satellite Downlink	CATV Channels	Broadcast TV Stations
Four Year Public Institutions	9	7	4	2	5	1	1	9	10	8	3
Community Colleges	9	7	1	1	2			14	14	12	4
Independent Institutions	1	2			1			1	1		
Total	19	16	5	3	8	1	1	24	25	20	7

**Table S: Compressed Video, Radio Stations
Academic Year 1999-2000**

Institutions Having Interactive Digital Compressed Video Codecs	Broadcast Radio Stations
Four Year Public Institutions (13)	12
Community Colleges (16)	15
Independent Institutions (27)	2
Total (56)	28
	6

Twenty (20) public institutions operated cable channels (CATV), and 7 managed their own broadcast TV stations.

Compressed Video, Radio and Audio

The *Maryland Distance Learning Network* (MDLN) was begun in 1994 to encourage the sharing of courses among Maryland campuses and with high schools.. MDLN, carried on broadband DS-3 fiber optic lines, is compressed very little, so that the received picture appears as full-motion television. The *University of Maryland Interactive Video Network* (IVN) and the *Baltimore Regional Community College Interactive Video Network* are both heavily compressed, leading to slight distortions of the picture. However, all three networks function well as a distance learning medium. The full motion MDLN is more easily accepted by public school children, but adults adapt quickly to all three systems. Compressed video usage is now growing more rapidly than satellite usage. On the other hand, Web-based multi-media instruction on personal PCs is growing more rapidly than interactive video in general.

Among the institutions responding to the survey concerning their practices in 1999-2000, 27 public institutions (out of 29 total) and two (2) independent institutions out of 26 were using interactive compressed video to deliver courses.

The use of radio by colleges and universities for course delivery is not wide-spread. Six (6) institutions reported having broadcast radio stations. However, the use of these radio stations is primarily for training communications majors rather than for delivering instruction.

VI

Concluding Remarks

Now that we have two comparable surveys of distance learning activity in Maryland---for 1997 and for 1999-2000, we are able to see patterns in data which confirm developments suggested by the earlier data collection. While the overall impression left by the data is one of explosive, revolutionary growth in distance learning, there are also aspects leading to concern.

Whereas, in 1997 few Maryland institutions were offering DL courses by asynchronous online delivery, three years later 21 of the 29 public colleges and universities were offering these courses. In 1,801 credit courses offered by distance learning technologies, these 21 public institutions had 50,850 individual enrollments. This enrollment, when converted to full-time equivalent students (FTES), is the equivalent of 5,085 full-time students. This is about the size of the FTES enrollment of Salisbury University or Frostburg State University. Of course, we must always remember that the vast majority of these enrollments are at one institution—the University of Maryland University College.

The reverse side of this revolutionary environment has been the slow development of distance learning among the independent institutions. Only 7 of the 26 independent institutions reported offering credit courses by DL technologies. These seven institutions shared 2,344 enrollments. Most (325) of the 334 DL courses offered by independent institutions were attributable to only 4 institutions.

So, a "technology gap" or "digital divide," first noted in 1997, continues and even grows between the colleges and universities that have embraced and can afford the technology revolution and the institutions that are being left behind technologically. Partially, this exists because of the strength of institutional missions and differing student markets. But it also exists because smaller public campuses and most independent institutions have not been able to afford the basic technological infrastructure required by online learning.

It is a source of concern that many Maryland colleges and universities do not have the baseline equipment and services necessary for the fastest growing form of postsecondary education and training. If Maryland institutions of higher education are to be competitive with public and independent institutions in other states and with entrepreneurial institutions capable of serving global markets (e.g., the University of Phoenix and the United States Open University), and with commercial purveyors of educational services, the technology gap among Maryland institutions must be overcome. If it is not, the State's workforce will not be competitive with the workers in other states, and the Maryland economy will suffer in proportion to the unrealized potential of the workforce.

There are other aspects of the competitive environment of distance learning which are not covered in this study but have been reported in other studies by the Maryland Higher Education Commission---notably the *Higher Education Information Technology Study: A Comparison of*

State Funding for Statewide Initiatives (MHEC, August 2000). That study compared statewide initiatives to encourage and support distance learning in four areas:

- Educational networks
- Statewide virtual universities
- Digital libraries
- Campus infrastructure.

Whereas Maryland has provided specific and targeted support in the area of campus infrastructure, there has been no targeted and directed State initiative in the other areas.

***MarylandOnline* and the *Maryland Digital Library* can help the institutions less active in distance learning achieve a more level playing field while also providing needed statewide services to the technology leaders. Such statewide “utilities,” that provide services to all institutions, can assure that Maryland’s higher education institutions have the necessary infrastructure of online services: an internationally recognizable website for all Maryland institutions, online student services, faculty technology training, and online access to library materials, e-journals and databases.**

MARYLAND HIGHER EDUCATION COMMISSION

FORM DE: DISTANCE EDUCATION SURVEY

Institution _____

Name of person completing this form _____

Title/Position _____ Phone # _____

Address: _____

Definition of "Off-Campus Distance Learning Instruction:" For the purpose of this survey, the term "distance education" refers to education or training delivered off-campus via audio, video and/or computer technologies, but does not include courses conducted exclusively via traditional print-based correspondence or courses in which the instructor travels to the remote site to deliver instruction in person for all or most class meetings. For purposes of this form, "off-campus" means *a location other than the principal location of the sponsoring institution*. "*Off-campus site*" may include a branch campus, a student's home, a workplace, or any other site where instruction is delivered electronically.

Reporting period: The reporting period is Fall semester 1999 and Spring semester 2000.

1. How many individual courses (course titles, not sections of courses) did your institution offer to off-campus students by some form of off-campus distance education instruction during the reporting period? For example, English 101 is one course regardless of the number of sections offered. Count a course twice if it was offered in both the Fall and Spring semesters.

_____ Total # of courses _____ Total # of Credit Courses _____ Total # of Non-credit Courses

2. How many students (duplicated headcount) were registered in distance education courses during the reporting period? The number given should reflect total course registrations.

	Credit Enrollments	Non-Credit Enrollments	Total Enrollments
--	--------------------	------------------------	-------------------

Maryland residents	_____	_____	_____
--------------------	-------	-------	-------

Out-of-state students	_____	_____	_____
-----------------------	-------	-------	-------

Total enrollments	_____	_____	_____
-------------------	-------	-------	-------

3. Does your institution have a separate office dedicated primarily to distance education?

_____ Yes _____ No

4. Of the total number of distance education courses your institution offered and completed, how many used the following technologies as the **primary** mode of delivery (If a course used multiple technologies, count it under each technology used only if you cannot determine the primary technology) and how many course registrations were attributable to each form of delivery:

- (A) _____ # Two-way interactive video and audio
- (B) _____ # One-way live video, one-way audio (no live interaction during instruction)
- (C) _____ # One-way prerecorded video
 - (D) _____ # Asynchronous online (e.g., Internet or bulletin board systems)
 - (E) _____ # Two-way online (computer-based) interaction during an instructional period
 - (F) _____ # Other (Please specify technology) _____

5. Of the total number of live and interactive video courses your institution offered, how many were offered at the following types of sites? (If a course was offered at multiple sites, count it under each type of site):

- (A) _____ # at a branch campus, center or other off-campus instructional site of **your** institution (includes courses originating at a branch campus or other off-campus site and delivered to students on your main campus)
- (B) _____ # at a public 4-year college or university in Maryland
- (C) _____ # at a community college in Maryland
- (D) _____ # at an independent college/university in Maryland
- (E) _____ # at a public secondary school in Maryland
- (F) _____ # at a public elementary or middle school in Maryland
- (G) _____ # at the student's home
- (H) _____ # at a private sector workplace
- (I) _____ # at a state agency site
- (J) _____ # at a military base
- (K) _____ # at other sites in Maryland (Please describe) _____
- (L) _____ # at sites outside of Maryland (Please describe) _____

6. Of the total number of distance education courses your institution offered, for how many was the course content developed by each of the following means? (Select only one method for each course):
- (A) _____ # developed by faculty or a department at your institution
- (B) _____ # developed by another institution of higher education
- (C) _____ # developed in collaboration with another institution of higher education
- (D) _____ # developed by a commercial vendor
- (E) _____ # other developer (Please specify) _____
-
7. Of the total number of distance education courses offered by your institution, how many were offered exclusively as distance education courses (i.e., there was no equivalent course taught during the same semester on campus)? _____ #
8. How many customized training activities did you offer for clients? _____ #
9. During the reporting period, could students at your institution complete an entire degree program (120+ credit hours for a Bachelor's degree; 60+ for an Associate degree) by taking distance education courses exclusively? _____ Yes _____ No
10. During the reporting period, did your institution offer any academic degree programs primarily by telecommunications? For these purposes, a "program offered primarily by telecommunications" means that more than 75% of the courses for a degree program are available by telecommunications.
_____ Yes _____ No
11. If you answered "Yes" to questions 9 or 10, indicate the "program(s) offered by telecommunications" by name and degree level in the table on the following page. If you need more space, please make additional copies of the table.

Programs Offered by Telecommunications

12. Is your institution a member of MarylandOnline? _____ Yes _____ No

13. Is your institution a member of the Maryland Digital Library? _____ Yes _____ No

14. How many of your distance education courses were designed primarily for each of the following? (Do not double count courses.)

- | | | | |
|-----------|---|-----------|--|
| (A) _____ | Undergraduate students | (E) _____ | High school students |
| (B) _____ | Graduate students | (F) _____ | Elementary/middle school s students |
| (C) _____ | Professional continuing ed. students
(e.g., medical personnel, teachers) | (G) _____ | Adult basic education students
(e.g., GED, ESL) |
| (D) _____ | Other continuing ed. students | (H) _____ | Other (please specify) _____ |
-

15. (A) For the reporting period, indicate, by circling the appropriate number, which of the following resources were available to students enrolled by your institution in distance education courses:

	Not available	Available for some courses	Available for all courses
A. Automated telephone or online application	1	2	3
B. Telephone/computerized registration	1	2	3
C. Online academic advising/counseling	1	2	3
D. Online financial aid application	1	2	3
E. Instructor visits remote site(s)	1	2	3
F. Toll-free telephone, E-mail or online access to instructor	1	2	3
G. Teaching assistant, tutor, facilitator regularly available at remote sites	1	2	3
H. Toll-free telephone, E-mail or other online access to technical support staff (help desk)	1	2	3

	Not available	Available for some courses	Available for all courses
I. Ability to electronically			
a) access your institution's library catalog	1	2	3
b) order a library item	1	2	3
c) reserve a library item	1	2	3
d) download a copy of the item desired	1	2	3
J. Cooperative agreements for students to use other libraries	1	2	3
K. Online access to wide area networks	1	2	3
L. Other (Specify)	1	2	3
_____	1	2	3
_____	1	2	3
_____	1	2	3

16. For the reporting period, please indicate if training/technical assistance, including peer training, was available to your faculty in the following areas by circling the appropriate column:

	<u>Available</u>	<u>Not Available</u>
(A) Use and application of distance education technologies	Yes	No
(B) Development of curricula for distance education courses	Yes	No
(C) Teaching methods for distance learning courses	Yes	No
(D) Other (Please specify)	Yes	No
_____	_____	_____
_____	_____	_____

17. During the reporting period, please indicate with a which of the following types of services and equipment your institution made available to faculty and/or students to support the production and/or distribution of distance education courses:

Type of Facility/Equipment	Available service/equip.	Number (if applicable)
A. Computer-and Internet-based:		
(1) Electronic Classroom(s) (networked computer classroom)	_____	_____
(2) Internet Node Site(s) (indicate bandwidth of connection: _____)	_____	[REDACTED]
(3) Internet Electronic Mail	_____	[REDACTED]
(4) World Wide Web server(s)	_____	[REDACTED]
(5) Institutional Website	_____	[REDACTED]
(6) Webpage capability for students	_____	[REDACTED]
(7) Bulletin board or computer conferencing system	_____	[REDACTED]
(8) Class listserv capabilities	_____	[REDACTED]
(9) Voice mail	_____	[REDACTED]
(10) Other technologies (Please specify):		
B. Video and audio		
(1) Full Production TV Studio(s)	_____	_____
(2) TV Field Production Unit(s)	_____	_____
(3) ITFS Channel(s)	_____	_____
(4) ITFS Receive Site(s)	_____	_____
(5) Microwave Distribution Link(s)	_____	_____
(6) Ku Band Satellite Uplink(s)	_____	_____
(7) C Band Satellite Uplink(s)	_____	_____
(8) Ku Band Satellite Downlink(s)	_____	_____

Type of Facility/Equipment	Available service/equip.	Number (if applicable)
(9) C Band Satellite Downlink(s)	_____	_____
(10) CATV Channel(s)	_____	_____
(11) Broadcast TV Station(s)	_____	_____
(12) Broadcast Radio Station(s)	_____	_____
(13) FM Subchannel(s)	_____	_____
(14) Interactive Digital Compressed Video Codecs	_____	_____
(15) Digital Compressed Video Transmission Links (indicate bandwidth used: _____)	_____	_____
(16) Audioconference Bridge(s)	_____	_____

Reproduction Basis

This document is covered by a signed "Reproduction Release (Blanket)" form (on file within the ERIC system), encompassing all or classes of documents from its source organization and, therefore, does not require a "Specific Document" Release form.

This document is Federally-funded, or carries its own permission to reproduce, or is otherwise in the public domain and, therefore, may be reproduced by ERIC without a signed Reproduction Release form (either "Specific Document" or "Blanket").
